

“Cerebellar Purkinje Neurons” and “Hippocampal Pyramidal Neurons”

Art Installation

Society for Neuroscience Headquarters Building
Washington, D.C.

About the Artist

Greg Dunn received his PhD in neuroscience from the University of Pennsylvania. He is particularly interested in the emerging field of epigenetics, specifically how

exposure to aversive environments results in changes to the brain that can persist across generations. An admirer of minimalist Chinese, Japanese, and Korean scroll and screen painting, Dunn extends the natural themes explored in these traditions to the microscopic scale of neurons.
